## Haynes ${ }^{\circledR} \mathbf{2 4 2}^{\circledR}$ alloy

UNS N10242

Applicable Specifications
Wire \& Bar ASTM B434 (chemistry only)

Description: HAYNES ${ }^{\circledR} 242^{\circledR}$ alloy is an age-hardenable nickel-molybdenum chromium alloy which can be strengthened through an ordering reaction upon aging, while maintaining high ductility. The alloy's tensile and creep strength properties up to $1300^{\circ} \mathrm{F}\left(705^{\circ} \mathrm{C}\right)$ are considerably improved compared to solid solution strengthened alloys. The coefficient of thermal expansion for $242^{\circledR}$ alloy are also lower than most other alloys, and it has very good oxidation resistance up to $1500^{\circ} \mathrm{F}\left(815^{\circ} \mathrm{C}\right)$. Other notable characteristics include excellent low cycle fatigue properties and resistance to high-temperature fluorine rich environments.

Applications include: Seal rings, Containment rings, Duct segments, Casings, Fasteners, Nozzles, Pumps, Fluoroelastomer process equipment, HF acid processing equipment, Springs
Industries supplied include: Aerospace, Industrial Heat Treating, Power Generation, Chemical Processing
